

Bias and Variance.

Bias \rightarrow Error in the training data

Variance \rightarrow Error in the Test data.

Classification Task

$o \rightarrow$ Negative
 $x \rightarrow$ Positive

Underfitting \rightarrow Model performs poorly on the training data as well as Test data. (High Bias & High Variance)

Overfitting \rightarrow When model only performs well on training data but poorly performs on test data. (Low Bias & High Variance).

e-g-

Age	Weight	Gender	Diabetes
22.6	70.1	M	0
21.6	70.6	M	1
Test data → 21.6	70.6	M	[?] 1

e-g →

Train → 100%
 Test → 65% → Overfitting

Train → 45%
 Test → 43% → Underfitting

Train → 10%
 Test → 9% → Underfitting

Generalized → Model which performs well on Training data as well as Test data.

Train \rightarrow 78%

Test \rightarrow 73%

- Generalized model.
(Low Bias & Low Variance)
